

Dolev Group

Line of Business

Magnetic Shielding Solutions
Solution for Electrical
Pollution
EMF/RFI/EMI Shielding

Established

1994

Dolev group is Israel's leading premier providers of electromagnetic shielding solutions for institutional sector, private & business. Dolev was established in 1994, the company is still managed by its founders and owners, and supported by skilled team.

Dolev Ltd.

Dolev Ltd. is a quality-focused engineering firm founded in 1994 whose diversified industrial experience results in innovative and complete solutions for electromagnetic field problems EMF/ELF DC/AC field. We have a proven team of experi-

- Dolev Electromechanic Technologies & Engineering Ltd.
- Dolev Clean Environment Ltd.

Dolev Clean Environment Ltd.

Dolev Clean Environment Ltd. has set itself a major task to explain the concept of "dirty electricity". Electrical pollution ("dirty electricity") is, in simple terms, 'noise' generated in and conducted by the electrical supply wiring system by common electrical devices, household appliances and power lines. This is a type of power characterised by higher frequencies (4kHz to 100kHz) that can

enced engineer dedicated to providing state-of-the-art solutions to today's demanding needs.

An expert support staff exists with expertise in providing high quality CAD drawings, maintenance, calibration, and assembly of control panels.

DOLEV Ltd. is a privately owned company acting as an exclusive representative of various leading EMI/RFI/EMF electronic industry manufacturers.

Our world is full of electromagnetic waves originating from high voltage electric and magnetic sources such as electricity generation and distribution, medical electrified trains and trams.

A new electromagnetic shielding system, Dolev Smart Shield Panel™, has been developed by Dolev specialist producers of EMI/RFI/EMF shielding, to create protection for both people and sensitive equipment from the effects of interference from electromagnetic fields.

Dolev Ltd. has exclusive sales & distribution representative of active and passive components & hardware for electronic packaging.

Thanks to a skilled and dedicated team the company has devolved and today it includes two companies:

have a negative impact upon our bodies.

To help protect against the negative effects of dirty electricity it is recommended that the average European home install 15 Filters. Some large homes or buildings may require additional boxes of Filters. To ensure optimum performance of the Filters the Micro surge Meter is highly recommended to monitor the effectiveness of the Filter arrangement.

Experience has shown that additional Filters should definitely be added for Meter readings above 30. For readings above 20 more benefits are probable when additional Filters are added.

More and more we are surrounded by non ionizing electromagnetic radiation, mainly caused by the increasing quantity of electrical equipment in our living environment.

Scientific research proves that there is a relationship between exposure to electromagnetic radiation and health problems. Radiation now with asbestos it took several decades before the scientists all agreed that both asbestos and non ionizing electromagnetic radiation affect our health in a very negative way.
